KWIKTAG for Microsoft SharePoint[®]

Complement and Complete Your SharePoint Solution
with KwikTag

You're using Microsoft SharePoint to streamline information sharing and collaboration for employees, customers and suppliers... but that's only half the picture.

Robust, Secure and Scalable

KwikTag leads in patented document capture, image processing and scalable image storage; utilizes SharePoint's security schema and maintains all revisions

Process Flexibility

Whatever your process or vision, KwikTag provides a vital link between your SharePoint portal and your transactional business systems (including Microsoft Dynamics GP, NAV and AX). Wherever paper or electronic documents fit into your business processes, KwikTag seamlessly delivers documents in context

Quick and Sustained Value

KwikTag implements in days and works without the need for additional software or hardware with unlimited and passionate customer support

KwikTag provides the missing link between real world, paper-driven processes and virtual transactional workflow and collaboration environments like SharePoint by delivering:

Complement and Complete Your SharePoint Solution with KwikTag

Scalability and Security

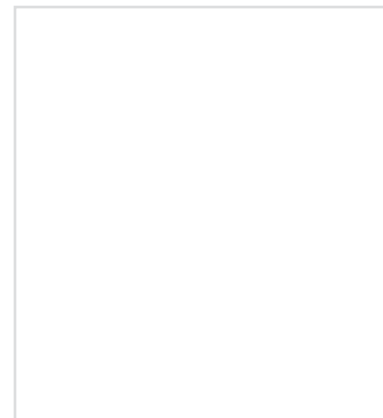

Embedded in Dynamics

Adaptable Processes

Easy, Efficient and Cost-Effective

Sharepoint 2010 delivers a robust and secure platform for managing documents, records, rich media and email. Combined with automated workflows for document review and approval, user-friendly templates and robust management capabilities for IT, SharePoint has come of age as a cost-effective enterprise document-centric workflow and collaboration solution.

**The only thing missing:
support for paper
document-driven line of
business processes.**

1. Transactional Content Management (index, approve, create ERP transaction and monitor the whole process in SharePoint via metadata updates)

2. Document Scanning and Capture
3. Business Process Management

Seamlessly embedding document imaging within Microsoft Dynamics ERP systems and extending secure access to these resources within SharePoint, KwikTag integrates paper and process throughout your organization

Contact ImageTag today to learn more.

KwikTag optimizes the total cost of ownership and furthers the reach of SharePoint across the enterprise and outside it, enabling you to fully leverage your SharePoint investment while enjoying a quick return.

Case Studies

Document Capture and Management for SharePoint

Extending documents across the enterprise

Transactional Content Management for SharePoint

Extending transactional information and documentation across the enterprise with secure access.

One company extends access to certain human resource documents in the Dynamics ERP to each employee. Naturally, the documents must be secured with individual access and available in a timely manner. KwikTag integrates with both the Dynamics ERP and SharePoint to provide the authorized documents at each touchpoint – all documents for authorized HR personnel within the ERP, and selected documents to the individual employee through SharePoint, using SharePoint security.

Business/Enterprise Portal Embedded Transactional Content Management

Sharing documentation in context as part of approval processes and transaction processing and audit

Using the Business Portal Requisitioning workflow routing and approval, this company desired access to the associated documents from the initial requisition, through purchase order and invoice, to audit of transactions in the Dynamics ERP. KwikTag integrates at every step – automatically receiving the metadata from the Business Portal requisition, associating the document either by indexing first (requisition creation) and scanning when convenient, or prior to that by scanning first. After the requisition converts to a purchase order, KwikTag provides instant access to all associated documents for purchasing, accounts payable and audit through the embedded KwikTag client in the Dynamics ERP.
